A 3-2 PROGRAM OF COLLEGIATE EDUCATION

in

LIBERAL ARTS AND SCIENCE
AND ENGINEERING

at

ELON UNIVERSITY

AND

THE PENNSYLVANIA STATE UNIVERSITY

August 2009
A. INTRODUCTION

Elon University and the Colleges of Engineering and Earth and Mineral Sciences of The Pennsylvania State University agree to establish an educational program in liberal arts and sciences and engineering. Three years, or the equivalent, will be spent by a participating student at Elon University, where the student will study liberal arts and science subjects along with pre-engineering courses. Upon satisfactory completion of the first three years, the student will enter the Pennsylvania State University and complete the engineering major degree requirements. A successful completion of these programs will lead to an appropriate baccalaureate degree from each institution. Such a cooperative program is being created in an effort to fulfill the following objectives:

i. To cooperatively provide a general education in liberal arts and sciences, as well as engineering education for each student enrolled, so that through approximately five years of study, depending on the major and completion of recommended courses, a student may complete what otherwise could require six or more years.

ii. To provide a student who has not yet decided between engineering and other disciplines, additional time to make that decision while the student studies both arts and sciences during the first three years at Elon University.

iii. To enable The Pennsylvania State University to attract a more diverse population to its engineering programs.

iv. To enable qualified students to receive both a liberal and technical education and, in so doing, provide the Commonwealth and the Nation with more broadly educated engineers.

B. PROCEDURES

Admission and the transfer of students in this 3-2 cooperative program will be through the application of the following procedures and policies:

1. Application for admission to the program will be made to Elon University, where the candidate will be subject to the admission requirements of that institution. Only students admitted to Elon University as first-semester (freshmen) students may participate in this 3-2 program. An individual who has been registered as a degree candidate and established a degree candidate record at The Pennsylvania State University prior to entering the 3-2 program at Elon University will be considered a re-enrollment candidate and must meet the criteria for re-enrollment in the major at The Pennsylvania State University and not as a participant of the 3-2 program.

2. A student will indicate the desire to follow the 3-2 program either at the time of the student's admission to Elon University, or early enough in the student's program to permit the student to complete as many of the suggested prerequisite courses, listed in the Appendix of this contract, as possible. Results from aptitude and achievement tests, records of scholastic achievement, and other pertinent information will be exchanged between institutions to aid both in guiding and in counseling students and prospective students. The Pennsylvania State University will provide Elon University with copies of curriculum planning guides used by advisers at Penn State for each major.

Elon University is responsible for informing students in the 3-2 program of the requirements for admission to Penn State, as described in this document and is encouraged to provide each student with a copy of this contract. Students should also be made aware of the courses that are available at Elon University that can be used to meet degree requirements for each of the majors that are part of this agreement. To that end, students should be provided with a copy of the Appendix to this contract.

Students should be advised by Elon University that some government-provided financial aid may not be available for a total of more than four years of study because engineering is considered, by financial-aid regulations, to be a four-year program. Students may, however, be eligible for merit-based scholarships after they complete one year of study at Penn State.
3. With the exception noted, the following engineering majors are generally available in the College of Engineering to students participating in the 3-2 program: Aerospace Engineering, Biological Engineering, Bioengineering¹, Chemical Engineering¹, Civil Engineering, Computer Engineering, Electrical Engineering, Engineering Science, Industrial Engineering, Mechanical Engineering, and Nuclear Engineering. However, the majors that are under enrollment control at the time of transfer to Penn State are excluded and are not available for transfer as part of this agreement. Elon University will be given a 2-year notice of any major that will be coming under enrollment control and the exclusion of that major from the 3-2 program. The exclusion will apply to all students from Elon University, even those who had been admitted to Elon University before notification of the exclusion. Penn State will notify Elon University whenever a major will cease to be under enrollment control and become available for transfer.

In the College of Earth and Mineral Sciences, the following engineering majors are available as part of this agreement: Energy Engineering, Environmental Systems Engineering, Materials Science and Engineering, Mining Engineering, and Petroleum and Natural Gas Engineering.

4. At the end of the first (Fall) semester of the third year, a student becomes a candidate for transfer for any of the available majors if the student has completed the entrance-to-major course requirements² and has attained a cumulative grade point average of 3.00³ (on a 4.00 scale) or greater. In all cases, the cumulative grade point average that will be used to determine eligibility for an engineering major will be calculated by the method used at Penn State. Original grades plus the grades for the same courses that were repeated will be used in the calculation. Elon University may require higher academic standards for transfer.

5. The student should submit an application (available on the Web) to the Admissions Office of The Pennsylvania State University after the Fall of the student's third year at Elon University. The application should clearly indicate that the student is applying as a 3-2 student. It should be submitted promptly and no later than February 1 of the applicant's third year at Elon University. The completed application should be supported by the following documents:

   a) Final high school record
   b) Two copies of the official Elon University transcript, including all grades earned through the Fall Semester or Term of the third year
   c) Schedule of courses for the Spring of the third year
   d) Check sheet (see Appendix) of the courses taken and those planned for Spring Semester or Term of the third year, as they relate to the Penn State courses listed for the requested engineering major. Students must retain a copy of the check sheet for their own records.

The application and supporting documents will be evaluated by the appropriate officer in the Admissions Office and the respective Dean's Office of the College of Engineering or Earth and Mineral Sciences at The Pennsylvania State University. If the applicant meets the entrance requirements, the applicant will be offered provisional admission to The Pennsylvania State University in the 3-2 program, commencing with the following summer session or fall semester.

At the completion of the third year, two copies of the final official transcript of work taken at Elon University should be forwarded to the Admissions Office. The applicant's admission to The Pennsylvania State University will be changed from a provisional basis to a permanent basis if the student has maintained the minimum cumulative grade point average required for transfer, is in good standing at Elon University, and has fulfilled all conditions, if any, specified in the student's provisional admission. A minimum of 76 transferable and

¹ It is highly likely that more than two years will be required at PSU to complete the degree requirements for BIOE and CHE because major courses begin in the Spring Semester and are not offered every semester.

² For College of Engineering majors, a minimum grade of 'C' is required in calculus I and II (8 credits), calculus-based physics (4 credits, mechanics plus lab), and general chemistry (3 credits).

³ Students may enter the majors in the College of Earth and Mineral Sciences (EMS) with a minimum cumulative grade point average of 2.75.
applicable credits must be completed at Elon University. For the purpose of meeting Penn State degree requirements, a block of 76 credits (no more and no less) will be transferred to Penn State.

The student will be placed in the major in which provisional admission was offered, provided all entrance conditions are met. Under normal circumstances, failure to meet the conditions of provisional admission will result in the voiding of the offer of admission for the student and in his or her ineligibility to participate in the 3-2 program.

6. The suggested and available exposure to mathematics, science, engineering science, computer, liberal arts, and communications courses at Elon University is illustrated in the Appendix. The only required courses are those listed in Section B-4. However, it is in the student’s best interest to complete as many of the suggested courses for their intended engineering major as possible at Elon University so that they can complete the degree requirements at Penn State in the most timely manner. Course numbers and descriptions may change by the actions of the Elon University faculty or Penn State faculty. In such cases, the Appendix only would need to be amended. Elon University will receive regular updates about changes at Penn State and will be expected to regularly inform Penn State of changes at Elon University, as they relate to the 3-2 program. Students must bring a completed check-sheet (see Appendix) with them for their first meeting with their engineering faculty advisor.

The student’s preparedness for engineering courses will be assessed by his/her major department and will be based on the courses taken at Elon University, as described on the completed course check-sheet. If the student has not taken all the possible recommended courses at Elon University, it is very likely that more than two years (4 semesters) will be required to complete the Penn State degree requirements. The need to take missing requirements and the effect this may have on the student’s graduation date will be determined by the student’s major department at Penn State.

7. This agreement shall be reviewed on a 5-year cycle. As part of the review process, special attention will be paid to the total number of students and to the number of women and members of other under-represented groups in engineering that participate in the program from Elon University. A lack of response to requests for information and lack of adequate participation may result in termination of the agreement.

#### General Education Electives

- **Arts Electives (GA)**: 6 credits, e.g. Architecture, Art History, Integrative Arts, Landscape Architecture, Music, Theatre Arts
- **Health (GHA)**: 3 credits, Health Education and Exercise and Sport Activities
- **Humanities Electives (GH)**: 6 credits, e.g. American Studies, Classics, History, Humanities, Multi-Ethnic Studies, Philosophy, Religious Studies
- **Social & Behavioral Science Elective (GS)**: 3 credits, e.g. Anthropology, Human Development, Political Science, Psychology, Sociology

---

*College of Engineering (EN) Majors:

- AERSP  Aerospace Engineering
- B E  Biological Engineering
- BIOE  Bioengineering
- CH E  Chemical Engineering
- C E  Civil Engineering
- CMPEN  Computer Engineering
- E E  Electrical Engineering
- E SC  Engineering Science
- I E  Industrial Engineering
- M E  Mechanical Engineering
- NUC E  Nuclear Engineering

*College of Earth and Mineral Sciences (EMS) Majors:

- ENENG  Energy Engineering
- ENVSE  Environmental Systems Engineering
- MATSE  Material Science and Engineering
- (PLMSE)  Polymer Science and Engineering
- MNG E  Mining Engineering
- PNG E  Petroleum and Natural Gas Engineering
